

II. CLAIM AMENDMENTS

1. (canceled)

2. (currently amended) A terminal according to claim 12 ~~claim 1~~, wherein the controller unit changes the orientation of the soft label without changing the position of the predetermined area relative to the at least one softkey.

3. (currently amended) A terminal according to claim 12 ~~claim 1~~, wherein the controller unit changes the orientation of the soft label in response to a state change of the terminal or a upon a user entered command.

4. (currently amended) A terminal according to claim 12 ~~claims 1~~, wherein the controller unit changes the orientation of the soft label in response to a signal from an orientation sensor in the terminal.

5. (currently amended) A terminal according to claim 12 ~~claim 1~~, wherein the controller unit applies the same orientation changes to information on the display as to the soft label.

6. (currently amended) A terminal according to claim 12 ~~claim 1~~, wherein the soft label includes textual content.

7. (currently amended) A terminal according to claim 12 ~~claim 1~~, wherein the soft label includes graphical content.

8-9. (canceled)

10. (original) A terminal according to ~~claim 1~~ claim 12, wherein the hard label is formed by a hologram.

11. (canceled)

12.(currently amended) A mobile communication terminal having a user interface comprising:

a display for showing information,

a keypad including at least one softkey and a plurality of hard keys, the plurality of hard keys preferably includes a group of alphanumerical keys and/or one or more navigation keys,

the function of the softkey being controlled by a controller unit and being displayed as a soft label in a predetermined area of said display, and

wherein the controller unit is adapted to change the orientation of the soft label when the orientation of the mobile communication terminal is changed, and wherein said means also instructs the controller to change the functionality of the softkey and the information on said soft label in conformity with said changed functionality; and

A terminal according to claim 9, further wherein the __orientation of the __hard label is changed by rotating a ____polarized film relative to another polarized film.

13-26. (cancelled)

27.(previously presented) A mobile communication terminal having a user interface comprising:

a display for showing information,

a keypad including a plurality of hard keys,

at least one of the hard keys being formed by at least a partially transparent key body that allows objects under the key to be seen through the top of the key,

a pair of polarized films mounted, one over the other, for movement relative to one another under the keypad,

labels disposed beneath the polarized films for viewing through the polarized films, said labels including textual and or graphical content relating to the function of the hard key through which said label is viewed,

whereby the textual and/or graphical content of the label can be read in at least two different orientations depending on the relative orientation of the polarized films to one another.

28-29. (canceled)

30. (currently amended) A terminal according to ~~claim 29~~ claim 40, wherein the controller unit changes the orientation of the function to be confirmed or to be rejected without changing the position of the predetermined area relative to the confirming key and rejection key.

31. (currently amended) A terminal according to claim 40 ~~claim 29~~, wherein the controller unit changes the orientation of the function to be confirmed or to be rejected in response to a state change of the terminal or upon a user entered command.

32. (currently amended) A terminal according to claim 40 ~~claim~~-29, wherein the controller unit changes the orientation of the function to be confirmed or to be rejected in response to a signal from an orientation sensor in the terminal or in response to a manually activated switch.

33. (currently amended) A terminal according to claim 40 ~~claim~~-29, wherein the controller unit applies the same orientation changes to information on the display as to the function to be confirmed or to be rejected.

34. (currently amended) A terminal according to claim 40 ~~claim~~-29, wherein the function to be confirmed or to be rejected is represented by textual content.

35. (currently amended) A terminal according to claim 40 ~~claim~~-29, wherein the function to be confirmed or to be rejected is represented by graphical content.

36-37. (canceled)

38. (currently amended) A terminal according to ~~claim~~-37 claim 40, wherein the hard label is formed by a hologram.

39. (canceled)

40. (currently amended) A mobile communication terminal having a user interface comprising:

a display,

_____ a keypad having a function confirming key and a _____ function rejection key and
a _____ plurality of hard keys, _____ the plurality of hard keys preferably includes a
_____ group of alphanumerical keys _____ and/or one or more navigation keys _____ and

wherein at least one of the hard keys is provided with a hard label that can be read in
_____ at least two different orientations.

a function to be confirmed or to be rejected being controlled by a controller unit
and being displayed in a predetermined area of said display, and

an orientation sensor within the mobile terminal adapted to signal the controller
unit to change the orientation in which the function is displayed when the
orientation of the mobile communication terminal is changed; and

A terminal according to claim 39, wherein the orientation of hard label is changed by
_____ rotating a polarized film relative to another polarized _film.
